- Servant leader
- Problem-solving
- Work ethic
- Motivation
- Communication
- Delegation

// OVERVIEW

Linux architect & IT professional with over 20 years of technical experience with a focus on Linux system administration, network engineering & application development.

// EXPERIENCE

2024
Nîmes, France

Security Operations Manager
BforeAI

Security and risk management driver. Delivered over 110 documents on best security practices, architecture guides, and design paths, alongside the approval of 20 critical security policies. Developed Jenkins SecOps pipeline, automating vulnerability scans, port scans, code scanning & SSL verification. Delivered XDR / HIDS. Patched exploitable endpoints and improved internal MTA security. Delivered internal phishing campaigns, security awareness training, and developed a comprehensive Incident Response Plan (IRP). With a strong focus on compliance, I prepared SOC2 readiness documentation across the operational stack and successfully negotiated a 39% savings on an integrated GRC system. I played a key role in DORA and NIS2 readiness and corporate IT risk assessments, ensuring the organization meets evolving regulatory requirements. My efforts include delivering weekly vulnerability reports to engineering, improving system security, and negotiating cost-effective solutions.

2023
Lyon, France

Chief Technology Officer
Naveco

Implemented Agile framework including Jira & Confluence. Delivered over 40 Confluence pages explaining best practices, HLDs, architectural decisions and more. Organized outcome based meetings for Cloud & bare metal migration. Development team leader; DevOps, SecOps & FinOps. Agile servant leader & scrum master. Delivered HLD of TOM for Rails based production application. Delivered step-by-step guide for PaaS replatform to IaaS. Delivered IaaS solution for Rails application production & staging environments including micro-services, automated security focused solutions via Linux packages and custom BASH scripts. Delivered custom CI/CD pipeline using Jenkins and Capistrano. Integrated automated codebase virus scanning and code quality analysis. Replatformed PHP based application in Rails. Dockerized Rails production application. Delivered IT infrastructure monitoring solution with custom triggers and push notifications via Webhook.

2022 - 2023
Paris, France

CCoE Cloud Architect
Crédit Agricole CIB (for DevoTeam)

Developed HLDs (High Level architectural Designs) for Cloud migration. Developed best practice outlines for application containerization. Organized outcome based meetings for Cloud migration. Agile servant leader & Linux architect.

2018 - 2022
Lyon, France

Chief Technology Officer
LinkiLab

Implemented Agile framework including Jira. Development team leader; DevOps, SecOps & FinOps. Agile servant leader & scrum master. Delivered IaaS solution for Rails application production environment including micro-services. Automated security focused solutions via Linux packages and custom BASH scripts. Delivered CI/CD pipeline using Capistrano & GitLab. Fully rebuilt PHP based application in Rails including the following services; Stripe payment gateway, AWS S3 & Sendgrid. Application included; user dashboard, profile, rating system, premium benefits, private messaging, invoice / quote system, virtual salon, support desk, admin features & locales. Delivered IT infrastructure monitoring solution with custom triggers and push notifications via Webhook.
